

HELP FOR RETAILERS FROM THE BOND GROUP

All companies need to maximum their assets, particularly in times of economic slowdown, and replacing chiller and refrigeration equipment during store re-fits can be extremely expensive.

But says the Bond Group's Cabinet Refurbishment Division, - there is another way - to refurbish existing equipment!

The Group is one of Europe's leading specialists in chiller and refrigeration equipment and offers a refurbishment service providing the retailer with two options. Either to send the equipment away for partial or complete rebuild - including new evaporator coils, solenoids and expansion valves, internal and external panel's, or for cosmetic overhauls which can be carried out on the retailers own premises without the need for removal of any equipment from the site.

Another service offered by the Division, but only for equipment returned to the factory, is the facility for upgrading older cases to operate at new temperatures and on new refrigerant.

The option to customise cabinets is also available and, of course, includes new control systems, cabinet branding, new exterior panel designs, different colour finishes and merchandising arrangements

In fact, retailers may choose whichever level of service they prefer, confident in the knowledge that the Division, who are specialists in the whole process of keeping refrigerated cabinets operating at their optimum level, will help them fully maximum returns on their capital investment in the most cost-saving manner.
